

COP 3502

Project 3

Due October 25, 2016 (11:59 pm)

Sample Runs corrected 10-20-16

Background

A Fortune 500 company that runs currency exchange kiosks in all the major airports around the world has recently viewed your programming work. They were very impressed and now have a special job for you. The currency conversion software they currently have is long obsolete and no longer runs efficiently in their exchange machines. This is partly because the last group of people to write the code did not build the program's functionality into separate **methods** but rather jammed all their code into the `main()` method, which later proved to be a total disaster. Your assignment is to write an all-new version of the program that uses methods so that they can get their exchange booths back up and running and avoid losing customers. The kiosks allow the user to deposit money into their account (this is a temporary account that only exists until the user is finished with all his/her conversions), view the remaining U.S. dollar balance in the user's account, and withdraw arbitrary amounts in any currency that the machine supports.

Your Assignment

Your task is to write a Java program for the kiosk machines that can perform the tasks described above at the user's request. The task begins by printing a quick welcome message, displaying a table of currency values, and then proceeding to the main menu. At that point, the customer can

- A) Have their remaining balance displayed,
- B) Deposit a certain amount of one currency into their account and convert it into U.S. dollars,
- C) Withdraw a certain amount from their remaining balance in a particular currency, or
- D) End their transaction which will give them back all of their remaining balance *in U.S. dollars*.

Upon completion of A, B, or C, the program will return to the main menu (loop).

IMPORTANT: Since this company is a U.S.-based firm, options B) will automatically **convert any deposit currency into US dollars** i.e. The account only holds a U.S dollar balance. When the user withdraws a certain amount of their remaining balance in a particular currency **except USD**, the amount will be **converted from U.S. dollar balance plus 0.5%** of total withdrawal amount as convenience fee.

Example:

The user has a \$10 U.S. dollar balance in their account. If they want to **withdraw** 0.89 Euros from the account, the total amount withdrawn from the account is calculated as:

$$\text{amount} = 0.89 / 0.89 * (1+0.005) = \$1.005 \text{ USD.}$$

His/her remaining balance will be \$8.995 USD

ALL currency values will be stored as type **double**. There should be a balance variable in the class to store the balance of the account. Deposit/Withdraw amount should always be **positive** numbers. For simplicity, when withdrawing and depositing from/to the account, the value of the remaining balance should be rounded up to 2 significant digits both when displayed and saved. Round up is NOT required in conversions. The way to round up to a specific significant digit can be found in previous Labs. Please use the code below to update the balance so that it has 2 digits after the decimal. This should only be used in Options B) and C)

```
private static boolean updateBalance(double newBalance)
{
    balance = Math.round(newBalance * 100) / 100.0;
    if (balance >= 0) {
        return true;
    } else
        return false;
}
```

The currency conversion table (methods of conversion will be discussed later) that you are required to use is displayed below. **DO NOT** use any other conversion table found online as the values of these currencies are likely to change.

US Dollar	1.00
Euro	0.89
British Pound	0.78
Indian Rupee	66.53
Australian Dollar	1.31
Canadian Dollar	1.31
Singapore Dollar	1.37
Swiss Franc	0.97
Malaysian Ringgit	4.12
Japanese Yen	101.64

Mandatory Methods

For your convenience, we created a skeleton source file for you (including all the mandatory methods), please use the skeleton file to start your project. **KEEP the `balance` variable, `getBalance()` and `updateBalance()` methods unchanged.**

The following are a list of **MANDATORY** methods that you must use/implement in your program. **The functionality found in these methods may not be created anywhere else in the program!** We will only grade your methods. Not creating the methods exactly as described below will cause you to lose points as well as make your code disorganized and hard to understand. The methods will be tested using test cases. Some test cases are **corner cases** such as negative amount, divide by zero etc. When implementing these methods, considering the potential corner cases carefully. You may create additional methods, however, you **MUST** have the methods listed below.

7 Mandatory methods:

```
/**
 * Prints the conversion table at the start of the program (see the output examples).
 */
public static void printConversionTable()
/**
 * Prints the main menu (see output examples), allows the user to make a selection
 * from available operations
 *
 * @param input the Scanner object you created at the beginning of the main
 * method. Any value other than the 4 valid selections should generate an invalid value
 * prompt. Print the list again and prompt user to select a valid value from the list.
 * @return an integer from 1-4 inclusive representing the user's selection.
 */
public static int mainMenuOptionSelector(Scanner input)
/**
 * Prints the currency menu (see output examples), allows the user to make a selection
 * from available currencies
 *
 * @param input the Scanner object you created at the beginning of the main
 * method. Any value other than the 11 valid valid currency types should generate an
 * invalid value prompt. Print the list again and prompt user to select a valid value
 * from the list. the currency type will be the same as the type number used in
 * {@link #convertCurrency(double, int, boolean)}
 * @return an integer from 1-11 inclusive representing the user's selection.
 */
public static int currencyMenuOptionSelector(Scanner input)
/**
 * Convert the value amount between U.S. dollars and a specific currency.
 *
 * @param amount The amount of the currency to be converted.
 * @param currencyType The integer currencyType works as follows:
 * 1 for usd (U.S. Dollars)
 * 2 for eur (Euros)
 * 3 for bri (British Pounds)
 * 4 for inr (Indian Rupees)
 * 5 for aus (Australian Dollars)
```

```

*           6 for cnd (Canadian Dollars)
*           7 for sid (Singapore Dollars)
*           8 for swf (Swiss Francs)
*           9 for mar (Malaysian Ringgits)
*          10 for jpy (Japanese Yen)
*          11 for cyr (Chinese Yuan Renminbi)
* @param isConvertToUSD Tells the direction of the conversion. If the value is true,
then the conversion is from a foreign currency to USD. If the value is false, then
the conversion is from USD to the foreign currency
* @return the converted amount
*/
public static double convertCurrency(double amount, int currencyType, boolean
isConvertToUSD)
/**
* deposit the amount of a specific currency to the account
*
* @param amount      the amount to be deposited.
* @param currencyType the currency type will be the same as the type number used
in the convertCurrency(double, int, boolean) method. An Invalid
type will result in a deposit failure.
*
* @return if deposit succeeds (positive amount - not zero),
* the method will return * true. otherwise, return false
*/
public static boolean deposit(double amount, int currencyType)
/**
* withdraw the value amount with a specific currency from the account. The withdraw
amount should never exceed the current account balance, or the withdrawal will fail.
If the currency is other than USD, a 0.5% convenience fee will be charged
*
* @param amount      the amount to be withdrawn.
* @param currencyType the currency type will be the same as the type number used
in the convertCurrency(double, int, boolean) method. An invalid
type will result a withdraw failure.
* @return if withdraw succeed, will return true. If failed, return false
*/
public static boolean withdraw (double amount, int currencyType)
/**
* Displays message at the end of the withdraw, deposit, and endTransaction stating
* how much the user just withdrew/deposited and what type (this will be used in both
features B, C and D of the main menu).
*
* @param amount      the amount of currency withdrew/deposited
* @param currencyType the currency type will be the same as the type number used
in {@link #convertCurrency(double, int, boolean)}
* @param isDeposit    if true Log the deposit transaction, false Log the withdraw
transaction
* @return Return the formatted Log message as following examples:
*
*           You successfully withdrew 10.0 U.S. Dollars
*
*           You successfully deposited 30.0 Japanese Yen
*
*           Invalid input like invalid currencyType or negative amount,
will return a "Logging Error"
*/
public static String logTransaction(double amount, int currencyType, boolean
isDeposit)

```

Submission Requirements

Read the description for each mandatory method carefully

- Name the class “CurrencyExchange”. All Mandatory methods should reside in the CurrencyExchange Class. The source file should be named as “CurrencyExchange.java”. Please use the EXACT class name and source file name, or you will have a **ZERO** grade.
- **Zip the java file WITHOUT any folder hierarchy in a zip file. (or you will get a zero grade)**
- Name the zip file project3_uflid.zip where uflid is the alphanumeric portion of your UF email account that comes before the @ufl.edu part.
- Submit using Canvas

If you submit the .java file without zipping, your project will not be graded.

If your file is not named project3_uflid.zip, your project will not be graded.

If you do not name the Project and class exactly as specified, your project will not be graded.

Please only create one Scanner object to read input, otherwise, the autograder will not be able to provide input.

It is highly recommended that you test your program piece by piece before assembling your final code. You will have a much easier time if you build your program piece by piece rather than trying to write the entire program. Pay very close attention to the order that you give inputs to the sample program. Your output **should not differ in any way** from the sample output. Using additional prompts, words, abbreviations, etc may result in the grading program taking unnecessary points off.

Grading

- 100% of your program will be graded on its ability to generate proper output and using all of the mandatory methods.

Sample Run - 1 (user input is in red)

Welcome to Currency Exchange 2.0

Current rates are as follows:

```
1 - U.S. Dollar - 1.00
2 - Euro - 0.89
3 - British Pound - 0.78
4 - Indian Rupee - 66.53
5 - Australian Dollar - 1.31
6 - Canadian Dollar - 1.31
7 - Singapore Dollar - 1.37
8 - Swiss Franc - 0.97
9 - Malaysian Ringgit - 4.12
10 - Japanese Yen - 101.64
11 - Chinese Yuan Renminbi - 6.67
```

Please select an option from the list below:

1. Check the balance of your account

2. Make a deposit
3. Withdraw an amount in a specific currency
4. End your session (and withdraw all remaining currency in U.S. Dollars)

2

Please select the currency type:

1. U.S. Dollars
2. Euros
3. British Pounds
4. Indian Rupees
5. Australian Dollars
6. Canadian Dollars
7. Singapore Dollars
8. Swiss Francs
9. Malaysian Ringgits
10. Japanese Yen
11. Chinese Yuan Renminbi

8

Please enter the deposit amount:

2.91

You successfully deposited 2.91 Swiss Francs

Please select an option from the list below:

1. Check the balance of your account
2. Make a deposit
3. Withdraw an amount in a specific currency
4. End your session (and withdraw all remaining currency in U.S. Dollars)

1

Your current balance is: 3.0

Please select an option from the list below:

1. Check the balance of your account
2. Make a deposit
3. Withdraw an amount in a specific currency
4. End your session (and withdraw all remaining currency in U.S. Dollars)

3

Please select the currency type:

1. U.S. Dollars
2. Euros
3. British Pounds
4. Indian Rupees
5. Australian Dollars
6. Canadian Dollars

7. Singapore Dollars
8. Swiss Francs
9. Malaysian Ringgits
10. Japanese Yen
11. Chinese Yuan Renminbi

1

Please enter the withdrawal amount:

1

You successfully withdrew 1.0 U.S. dollars

Please select an option from the list below:

1. Check the balance of your account
2. Make a deposit
3. Withdraw an amount in a specific currency
4. End your session (and withdraw all remaining currency in U.S. Dollars)

1

Your current balance is: 2.0

Please select an option from the list below:

1. Check the balance of your account
2. Make a deposit
3. Withdraw an amount in a specific currency
4. End your session (and withdraw all remaining currency in U.S. Dollars)

3

Please select the currency type:

1. U.S. Dollars
2. Euros
3. British Pounds
4. Indian Rupees
5. Australian Dollars
6. Canadian Dollars
7. Singapore Dollars
8. Swiss Francs
9. Malaysian Ringgits
10. Japanese Yen
11. Chinese Yuan Renminbi

8

Please enter the withdrawal amount:

0.97

You successfully withdrew 0.97 Swiss Francs

Please select an option from the list below:

1. Check the balance of your account
2. Make a deposit

3. Withdraw an amount in a specific currency
4. End your session (and withdraw all remaining currency in U.S. Dollars)

1

Your current balance is: 1.0

Please select an option from the list below:

1. Check the balance of your account
2. Make a deposit
3. Withdraw an amount in a specific currency
4. End your session (and withdraw all remaining currency in U.S. Dollars)

4

You successfully withdrew 1.0 U.S. Dollars

Goodbye

Sample Run - 2 (user input is in red)

Welcome to Currency Exchange 2.0

Current rates are as follows:

- 1 - U.S. Dollar - 1.00
- 2 - Euro - 0.89
- 3 - British Pound - 0.78
- 4 - Indian Rupee - 66.53
- 5 - Australian Dollar - 1.31
- 6 - Canadian Dollar - 1.31
- 7 - Singapore Dollar - 1.37
- 8 - Swiss Franc - 0.97
- 9 - Malaysian Ringgit - 4.12
- 10 - Japanese Yen - 101.64
- 11 - Chinese Yuan Renminbi - 6.67

Please select an option from the list below:

1. Check the balance of your account
2. Make a deposit
3. Withdraw an amount in a specific currency
4. End your session (and withdraw all remaining currency in U.S. Dollars)

2

Please select the currency type:

1. U.S. Dollars
2. Euros
3. British Pounds
4. Indian Rupees
5. Australian Dollars
6. Canadian Dollars
7. Singapore Dollars
8. Swiss Francs

9. Malaysian Ringgits
10. Japanese Yen
11. Chinese Yuan Renminbi

10

Please enter the deposit amount:

203.28

You successfully deposited 203.28 Japanese Yen

Please select an option from the list below:

1. Check the balance of your account
2. Make a deposit
3. Withdraw an amount in a specific currency
4. End your session (and withdraw all remaining currency in U.S. Dollars)

1

Your current balance is: 2.0

Please select an option from the list below:

1. Check the balance of your account
2. Make a deposit
3. Withdraw an amount in a specific currency
4. End your session (and withdraw all remaining currency in U.S. Dollars)

3

Please select the currency type:

1. U.S. Dollars
